

RETAIL SALES –DATA AGENT

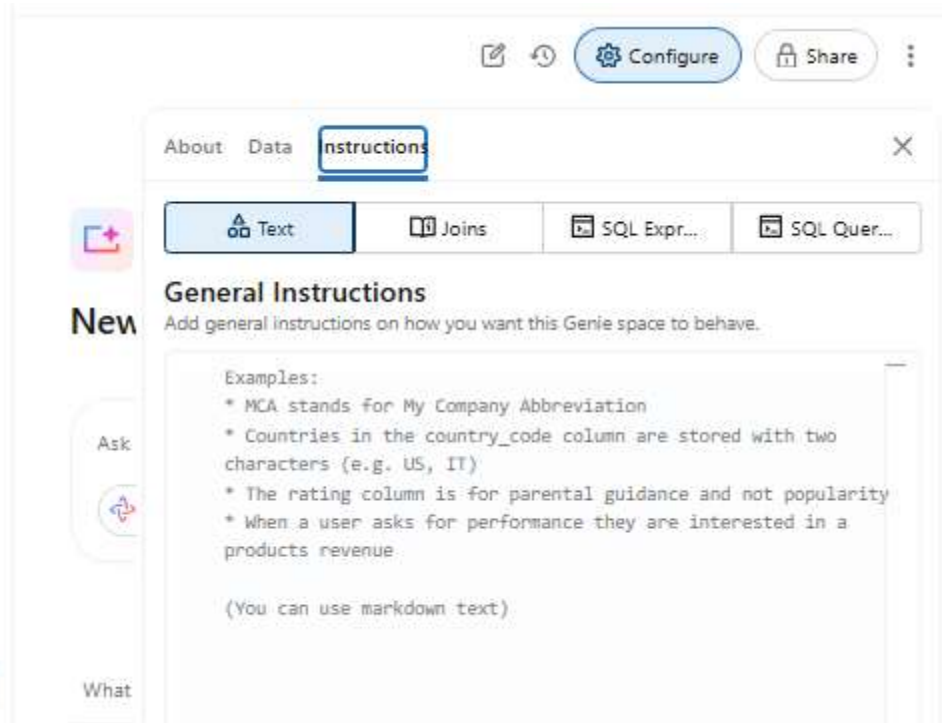

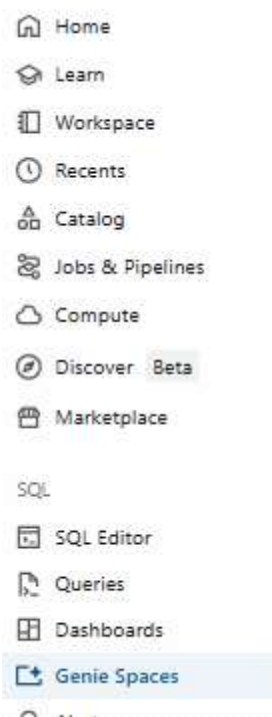

PRECIOUS TLALE

STUDENT NO: 2805001645

25/05/2026

This Project is about a Retail Sales Data Agent built using SQL. The Agent works with a retail sales dataset that has details on the table in columns. I did this project to make it easier to analyze retail sales data and find useful insights quickly using SQL Genre Agent.

STEP 1

The screenshot displays the Genie Spaces application interface. On the left is a vertical sidebar with navigation links: Home, Learn, Workspace, Recents, Catalog, Jobs & Pipelines, Compute, Discover (marked Beta), Marketplace, SQL, SQL Editor, Queries, Dashboards, and Genie Spaces (highlighted). The main area shows a 'New' dialog box with tabs for 'About', 'Data', and 'Instructions' (the active tab). The 'Instructions' tab contains a 'General Instructions' section with a text input area. The input area contains the following text:

Examples:

- * MCA stands for My Company Abbreviation
- * Countries in the country_code column are stored with two characters (e.g. US, IT)
- * The rating column is for parental guidance and not popularity
- * When a user asks for performance they are interested in a products revenue.

(You can use markdown text)

At the top of the main area, there are buttons for 'Configure' and 'Share'.

STEP 5

What are were our total sales last week?

› Thinking complete

Sales Data Not Available for Last Week

The dataset does not contain sales data for last week (May 17-23, 2026). The available data covers January 1, 2023 through January 1, 2024 only. [↗](#)

Most Recent Week in Dataset

For the most recent 7-day period in the dataset (December 26, 2023 - January 1, 2024), total sales were \$9,635 across 18 transactions from 18 unique customers. [↗](#)

If you'd like to analyze sales for a specific week within the 2023 timeframe, please let me know the dates and I'll be happy to pull that information for you.

The screenshot shows a chat window with a light blue header bar containing the question: "What are were our total sales last week?". Below the header, there is a list of messages. The first message is from the user, "Thinking complete", with a timestamp of "10:00 AM". The second message is from the assistant, starting with "Sales Data Not Available for Last Week". The assistant explains that the dataset does not contain sales data for last week (May 17-23, 2026) and that the available data covers January 1, 2023, through January 1, 2024, only. It then provides the "Most Recent Week in Dataset" information, stating that for the most recent 7-day period (December 26, 2023 - January 1, 2024), total sales were \$9,635 across 18 transactions from 18 unique customers. The assistant concludes by offering to analyze sales for a specific week within the 2023 timeframe if the user provides dates. At the bottom of the chat, there is a feedback section with the text "Is this useful?" and two thumbs-up/down icons, and a footer with "Share" and "Download PDF" links.

STEP 7

The screenshot shows the Microsoft Fabric interface. On the left, there's a sidebar with a search bar containing "w Space 2026-05-". Below the search bar, there's a "Ask your question..." section with "Agent" and "Chat" buttons. The main area displays a SQL query editor with a tab labeled "Instructions". The query text is "1 |SELECT column_1, column_2 FROM...". The interface includes a top navigation bar with "About", "Data", and "Instructions" tabs, and a right sidebar with "Text", "Joins", "SQL Expr...", and "SQL Quer..." buttons.
